**Energy Efficient Air Barrier**

**Moisture Protection**

**Structural Performance**

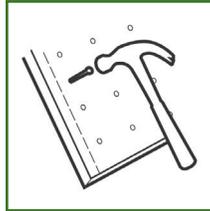

The exterior sheathing system on your home can significantly impact energy efficiency, comfort and all around build quality.

Rest assured, your builder chose ZIP System® sheathing and tape. It's a one-of-a-kind structural system with a built-in energy efficient barrier that keeps the elements out while keeping comfort and savings in.

The best builders use ZIP System sheathing and tape. It's the fastest way to the perfect tight house. And even though homebuyers typically don't see it, especially after the home is complete, your builder has chosen to use a high-quality product that you'll appreciate for years to come.

### Structural Durability

This is an engineered wood product, created for superior stability and durability. We use the same technology and resins as award-winning AdvanTech® subflooring. So you can rest assured that your home is solidly built with the strongest wall system.

### Superior Moisture Protection

During construction, your home is exposed to the elements. But with ZIP System sheathing, the water resistive barrier is built into the panel, which protects your walls from water. In fact, these panels have a 180-day exposure guarantee and there's absolutely no need for housewrap.

### Energy Efficiency Air Barrier

If your home's walls are not well sealed, it could cost you a lot of money on your energy bills. Fortunately, your home is well-built with a system that reduces air leakage into and out of your walls, protecting the R-Value of your insulation. Housewrap simply can't compete; it must be properly installed with fasteners, caulked and sealed, which rarely happens – it's just too labor intensive.

### Peace of Mind

We are so confident in ZIP System wall sheathing, that we back it with a best-in-class 30-Year Limited Warranty. And if you ever decide to sell your home, the fact that it's built with high-quality, durable materials will likely impress prospective buyers.
